

June 30, 2019

Portfolio Inception Date 4/28/2017 Separate Account Date 10/31/2002 Total Portfolio Assets \$29.6 million

Portfolio Description

This Portfolio seeks to provide investors with returns similar to the global equity markets with lower volatility over a full market cycle. It is globally-diversified with an approximate allocation of 60% U.S. and 40% non-U.S. stocks and may invest in securities of any market-capitalization. The Portfolio employs investment management techniques to identify securities that exhibit low volatility returns. Therefore it is expected that the Portfolio will generally underperform the global equity markets during periods of strong market performance.

Investment Strategy/Process

The portfolio management team uses active quantitative management techniques to forecast investment returns and to identify relationships between securities. The process uses factor models and also strives to identify groups of stocks that are less correlated to each other. The team constructs a risk-optimized portfolio with a focus on low-volatility securities. The portfolio is expected to be well-diversified with about 300 global securities. As a part of the risk management process, sector, country, and individual security weights will be constrained.

Growth of \$10,000 and Calendar Year Performance (%)

Chart represents the total market value if the contract is not surrendered. Performance reflects the deduction of current mortality and expense charge of 1.25% and applicable annual portfolio operating expenses. Performance of other contracts will be greater or less than the data shown based on the differences in contract charges and expenses paid by the contract holder.

Average Annualized Returns (%)

Periods less than one year are not annualized.

Table with 8 columns: Period, 3 Month, YTD, 1 Year, 3 Year, 5 Year, 10 Year, Since Incept. Rows include 'If Contract Is Held', 'If Contract Is Surrendered', 'MSCI World Minimum Volatility Index - USD Net Returns', and 'Lipper Global Multi-Cap Core Median'.

All data represents past performance of the subaccount in Thrivent Flexible Premium Deferred Variable Annuity (Contract W-BC-FPVA (05)) and is no guarantee of future results. Total investment returns and principal value of an investment will fluctuate and units, when redeemed, may be worth more or less than the original investment. Current performance may be lower or higher than the performance data quoted. Market volatility can significantly affect short-term performance, and more recent returns may be different from those shown. Call 800-847-4836 for or visit Thrivent.com for the most recent month-end performance results. Data reflects the deduction of the current and maximum mortality and expense charge of 1.25% and applicable annual portfolio operating expenses. Annual expenses are subject to change. See the prospectus for detailed information on fees related specifically to this subaccount.

Average annualized return calculations assume an initial investment of \$10,000. At various times the investment adviser may have reimbursed Portfolio expenses. Had the investment adviser not done so, the performance data shown would have been lower.

Average annualized returns do not include adjustments for annual administrative or additional feature charges. Maximum surrender charge is 7% if surrendered in the first year and decreases by 1% each subsequent year for the next six years. "If surrendered" data reflects the applicable surrender charge for the time period. "If held" values do not include surrender charges. "Since inception" returns are calculated from the later of the inception dates listed above and is based on the date the portfolio was added to the separate account used with this contract.

1 Source: Lipper. The Lipper median represents the median annualized total return for all reported portfolios in the classification. Lipper medians do not include sales charge/fees. If included, returns would have been lower.

Investment Objective

Thrivent Low Volatility Equity Portfolio seeks long-term capital appreciation with lower volatility relative to the global equity markets.

Who Should Consider Investing?

The Portfolio may be suitable for investors who:

- Seek long-term growth with less volatility.
• Have a long-term investment time horizon and a moderate risk tolerance.
• Are comfortable with experiencing underperformance during certain parts of the market cycle in exchange for potentially lower volatility over a full market cycle.

Portfolio Operating Expense Ratio

Gross: 1.48%
Net: 0.80%

The Advisor has contractually agreed, through at least April 30, 2020, to reimburse certain expenses associated with the Portfolio. Refer to the expense table in the Portfolio's prospectus.

Benchmark(s)

Indexes are unmanaged and do not reflect the fees and expenses associated with active management. Investments cannot be made directly into an index.

- Morgan Stanley Capital International (MSCI) World Minimum Volatility Index - USD Net Returns measures the performance characteristics of a minimum-variance strategy applied to a universe of large- and mid-cap stocks in 23 developed-market countries. It is an optimized version of the MSCI World Index.

Portfolio Management & Experience

Risks: The Portfolio primarily invests in equity securities. Although the Portfolio seeks lower volatility than the global equity markets, its returns will experience some volatility. The value of the Portfolio is influenced by factors impacting the overall market, certain asset classes, certain investment styles, and specific issuers. The Portfolio may incur losses due to investments that do not perform as anticipated by the investment adviser. Foreign investments involve additional risks, including currency fluctuations, liquidity, political, economic and market instability, and different legal and accounting standards. Quantitative investing uses models and factors that rely on historical data and may be incomplete. The use of derivatives (such as futures and swaps) involves additional risks and transaction costs, which could leave the Portfolio in a worse position than if it had not used these instruments. These and other risks are described in the Portfolio's prospectus.
